

TimberTrack

Decision support for planning and analysis when purchasing forest raw materials

- TimberTrack is the optimal tool for purchasers of forest raw materials.
- TimberTrack facilitates and simplifies interaction between purchasers, sellers, government authorities and others who are involved in the process.
- TimberTrack creates the basis for follow-up and feedback after logging has been completed.

The TimberTrack concept was developed in cooperation with our customers. It is easy to implement and suitable for both small and large organizations.

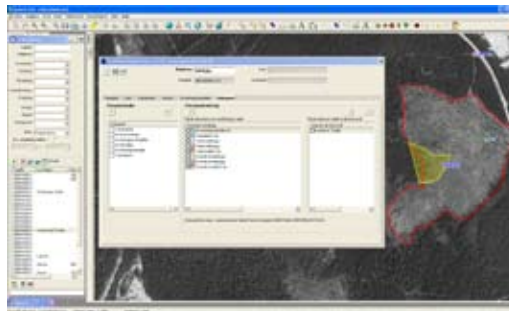

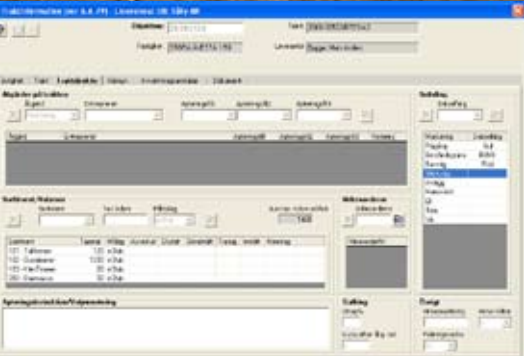

TimberTrack - customized support for forest-related activities

Based on either internal or external map information, TimberTrack makes it possible to get information, conduct analyses and obtain supporting documentation for the entire process of purchasing forest raw materials – from the first contacts made with owners, through the completion of logging and follow-up.

With TimberTrack you can:

- Search for and obtain lists of forest properties, along with any parcels belonging to the property
- Search for and filter information about registered property owners
- Select a property on the map and obtain information about the property owner
- Search for, or create an area and link it to a particular property or property owner
- Search for and/or create and place the landing associated with the area
- Plan and indicate the main roads to the area
- Indicate/create objects that must be given special consideration
- Register and obtain an overview of important information so-called graffiti
- Create/edit a list of contractors
- Create/edit a list of companies
- Transfer and retrieve an area/object via the history function.

Application

Application in Windows XP/Tablet, based on GIS motor from MapInfo.
Requirements: Windows XP or later, 1 GHz and 512 MB RAM, 16 bytes graphics 1024/768 (800*600) resolution.
